Adrian Valenzuela

Full Stack Engineer

adrianvalenz.com · adrianvalenz.web@gmail.com · linkedin.com/in/valenzuela-adrian/

PROFILE

Full stack engineer with 8+ years building and shipping production web applications, from solo projects to multi-engineer platforms. Owns projects end-to-end — scoping, architecture, and delivery — with minimal oversight, and mentors junior developers through code review and pairing. Uses AI tooling (Claude Code) responsibly and deliberately to accelerate delivery while avoiding the over-engineering and technical debt that unmanaged AI-assisted code tends to accumulate. Recognizes the importance of TDD and leans on it to deliver stable and functional applications and find bugs before users do. Bridgetown Core Team member and active open-source contributor who enjoys blogging about software.

EXPERIENCE

Full Stack Engineer — Sage Digital 2024 – Present

Remote, subcontract

- Lead developer on a major platform build for a popular big-city cycling club that helps them manage their members, subscriptions, and events. Includes complex Ride and Event logic that includes waitlist systems, automatic promoting, and member invitations to leader or join rides.
- Also led the migration of an application from Lovable to an independent hosted solution. Made the calls on infrastructure and laid out a developer workflow that accommodated the use of AI.
- Periodically contributes to smaller additional client projects for Sage Digital

Full Stack Engineer — UpaUSA 2024 – Present

Remote

- Led development of a peer-to-peer rental marketplace connecting renters and sellers in the construction and agriculture industries
- Integrated Stripe Connect for secure, compliant seller payouts.
- Considered trade-offs between choosing Stripe Express vs Standard account for users and stakeholder interests.
- Built a real-time live chat system with read receipts and email reminders leveraging ActionCable
- Implemented location-based search using Google Places API and Geocoder
- Built a custom calendar-style booking system with confirmation settings, emails, and secure payment workflows
- Originally built on OpenSearch but refactored later to leverage Ransack for less maintenance overhead
- Currently in maintenance mode and delivering minor library upgrades as needed.

Full Stack Engineer — NJMLS 2023 – Present

Remote

- Built numerous applications to enhance and augment the main system and workflows at NJMLS for their real estate listing services
- Created an admin management interface for staff to filter applications, update statuses, and request payments/signatures
- Automated PDF generation and document workflows with callbacks, web hooks, and email notifications
- Integrated DocuSeal for digital signing and Stripe Checkout for dynamic line-item payments leveraging APIs for both services
- Delivered a small application that allows users to walkthrough files and directories stored on company's DropBox with their API
- Periodically upgrades minor packages and releases for existing applications

Full Stack Engineer — Firm Studio Mar 2023 – Jun 2023
Remote

- Built a complex custom questionnaire builder for that allows tax offices to create custom surveys to onboard potential clients. Features include saving survey templates for reuse, dynamic calculations for invoices based on certain answers, and leveraged Hotwire for a dynamic experience via the web
- Translated Figma designs into production UI using Hotwire and Stimulus JS and collaborated with designers on creating a design system that can be repurposed throughout the application
- Touched on a Hotwire heavy application that allows tax accounts to generate SOC compliant documents and audits

Full Stack Engineer — Archway Recruiters Feb 2022 – Oct 2022
Remote

- Led the subsidiary onboarding project independently, coordinating requirements directly with stakeholders
- Optimized database performance, reducing N+1 queries and DB load
- Migrated custom HTML builder legacy email system to ActionMailer/AWS SES; managed AWS S3 & SQS
- Migrated the codebase from Rails 4 to 5.2
- Multi-tenancy was fragmented and I aided in refactoring the codebase to make it easier to apply features across all tenants at the same time while still leaving room for each tenant to have a customized look and experience.
- App was full of hard-coded statements and replaced them throughout the app to create a stable dynamic experience

Full Stack Engineer — Saddlebook Inc. Aug 2022 – Oct 2022
Remote

- Built dynamic UI components with Hotwire, StimulusJS, and ViewComponent
- Implemented slide-over menus, inline editing, and automatic input search
- Established a consistent design system using TailwindCSS and ViewComponents

OPEN SOURCE & PERSONAL PROJECTS

- HTMX powered CMS for Bridgetown's static site generator
- Maintains a small technical blog at https://mugenruby.com
- RubyWriter — an AI web builder that uses the Phoenix framework to build Rails applications at https://rubywriter.io
- Central Coast Classifieds — a regional online listing marketplace with security features such as an email relay system similar to Craigslist's, a secure click-to-call function to avoid calls from bots that encrypts and hides phone number from console. Building a RAG pipeline to make searching for users more intuitive with natural language.

HARD SKILLS

Frontend: HTML, CSS, JavaScript, React, StimulusJS, Turbo/Hotwire
Backend: Ruby on Rails, Elixir/Phoenix, Django/Python, PHP/WordPress/Laravel, React/Vue
Data: PostgreSQL, ActiveRecord, Redis, MySQL
Payments/Infra: Stripe, Stripe Connect, AWS (S3, SES, SQS), Heroku, ActiveStorage, ElasticSearch/OpenSearch

SOFT SKILLS

Leadership: Independent project ownership, technical mentoring
Communication: Active listener, clear verbal and written communication, supplies as much information as possible to give recipient the most relevant context to a topic
Adaptability: In everything when things unexpectedly change it is good to be as flexible as possible and having the right systems in place can help you steer quickly when needed.
Empathy: The quicker people realize we are all on the same team the faster we can remember that we are here to work together toward a common goal and make cool things to make the world a better place for others.
